Education

Velammal Institute of Technology **Aug 2019 – May 2023**
Bachelor of Technology in Information Technology; CGPA: 8.56/10 *Thiruvallur, Tamil Nadu*

Technical Skills

Languages: Python, JavaScript, TypeScript, SQL, HTML/CSS
Frameworks and Libraries: React.js, FastAPI, Spring Boot, Angular, Tailwind CSS, Redux Toolkit, RTK Query
Databases: PostgreSQL, Oracle
Tools and Technologies: Git, Postman, VS Code, Docker, AWS EC2, AWS S3, Nginx

Experience

Revenue Maxima **Aug 2025 – Present**
Associate at 7i Technologies *Chennai, India*

- Built full-stack features for three hospitality applications—Hotel PMS, Booking Engine, and Housekeeping—using React, TypeScript, FastAPI, and REST APIs.
- Accelerated data-heavy table workflows through server-side pagination, filtering, sorting, Redux Toolkit, and RTK Query, reducing observed loading time from approximately 10 seconds to 200 milliseconds.
- Connected frontend components to FastAPI endpoints to support reservation management, guest operations, room management, and housekeeping workflows.
- Supported deployments by retrieving Git updates, running Docker containers, verifying database migrations, publishing frontend builds to AWS S3, and serving applications through Nginx.

Aadasteck **Dec 2024 – Aug 2025**
Software Engineering Trainee *Chennai, India*

- Practiced full-stack development with Java, Spring Boot, React, Angular, HTML, CSS, and Oracle Database through technical training and project exercises.
- Structured application components using Model-View-Controller (MVC) principles to separate presentation, business logic, and database operations.
- Validated CRUD workflows covering data creation, retrieval, updating, and deletion across application modules.
- Diagnosed application issues and investigated API integration errors while checking interactions between frontend components, backend services, and databases.

Projects

Hotel Property Management System (PMS) | *React, TypeScript, FastAPI, PostgreSQL*

- Created hotel management workflows for reservations, guest records, room operations, check-in/check-out, billing, and reporting.
- Linked React and TypeScript interfaces with FastAPI REST APIs and PostgreSQL to exchange data between frontend workflows and backend services.
- Enforced protected-route access through JWT authentication and role-based access control (RBAC) for role-specific application permissions.
- Streamlined data retrieval with server-side pagination, search, sorting, and filtering; the relevant workflow's observed loading time improved from approximately 10 seconds to 200 milliseconds.

Hotel Booking Engine | *React, TypeScript, FastAPI, PostgreSQL*

- Designed property-search, room-availability, and rate-plan selection workflows for online hotel reservations.
- Crafted responsive interfaces for guest information entry, reservation details, and booking confirmation using React and TypeScript.
- Integrated frontend booking components with FastAPI REST endpoints to retrieve property, availability, and reservation data.
- Coordinated booking-related state management and API data fetching through Redux Toolkit and RTK Query across reservation workflows.

Certificates & Courses

- **HackerRank:** Java, CSS, SQL, React.js
- **Coursera:** Google UX Design
